SUMMARY

I own problems end-to-end — from discovering the problem to defining, prioritizing, building, and shipping the solution. I've independently shipped three products across consumer, fintech, and PM tooling, working across discovery, metrics, PRDs, prioritization, trade-offs, and hands-on building. Before moving into product, I spent four years delivering enterprise SAP planning and analytics solutions for clients, progressing from implementation consulting to owning projects and driving cross-functional delivery.

CORE SKILLS

Product: Product sense · User research · User Segmentation · Competitor Analysis · Data Analysis · Product Metrics · Feature Prioritization · Product Roadmap · PRD writing · Wireframing · UI/UX Design · Project Management · Stakeholder management · Cross-functional delivery

Technical: Rapid prototyping · AI-assisted development · LLM app design · SQL basics · SAP (planning & analytics) · Google Sheets / Cloud Run

Domain: Consumer / e-commerce · Generative AI · Fintech (SEBI/regulatory-aware) · Financial planning & analytics

PRODUCT PROJECTS (SELF-BUILT, END-TO-END)

Savio — AI financial-decision companion

[demo](#) · [code](#)

Consumer fintech

- Built Savio for in-between-income India (Rs. 40K–1.2L/month) — a chat-based financial companion that helps users judge their own money decisions against their actual salary, commitments and goals rather than generic advice.
- Designed a **decision-memory loop** that labels purchases as **worth-it, neutral, or regret** and resurfaces those patterns during future affordability decisions — turning scattered transactions into personalized behavioral feedback.
- Built an **AI eval test** putting Savio and a plain AI chatbot side by side on the same money questions, to measure how often each makes up numbers. The chatbot invented rupee amounts in **4 of 10** answers; Savio answered only from the user's real data, and refused the questions it had no data for.

FitCheck — cross-retailer fit-confidence Chrome extension

[demo](#) · [code](#)

Consumer / e-commerce

- Shipped a garment fit analyser across Myntra, AJIO and H&M India that reads **what a garment actually measures**, not just what body its size is sold for — turning a size chart into a decision, against the **25–30% of fashion returns driven by size**.
- 70% week-one retention, zero uninstalls across 19 sizing attempts.** Ran it with **zero LLM** — sizing is arithmetic — and built it to say "can't tell" when a measurement is missing rather than guess.

Amazon Discovery Intelligence — customer signal to PM prioritization

[demo](#) · [code](#)

SaaS

- Designed an **AI-assisted discovery workflow** that turns **~150 customer signals per run** into traceable, ranked product themes, reducing manual synthesis while keeping prioritization under PM control.
- Built a **grounded AI assistant** over the review data where **every claim it makes is cited to the customer reviews behind it**, one click away — so a PM can trace any AI answer back to raw feedback.

EXPERIENCE

Technical Project Manager — CorpAsia Pvt Ltd

Jan 2022 – Nov 2025

Enterprise financial-planning product delivery

- Cut the client's monthly and quarterly planning cycle 30–40%** by delivering revenue, CapEx/OpEx, HR, production, and consolidated planning modules on SAP, end-to-end.
- Ran delivery across five engineers** plus the technical and functional consulting managers, after moving from SAP technical consultant into the lead seat on the same engagement.
- Ran discovery with finance and HR, then owned prioritization and scope trade-offs across five modules — **negotiating deliverables and timelines directly with CFO-level stakeholders**.

EDUCATION

MA, English Language and Literature — University of Calcutta
